SUPPORTING FILE – SECURITY POLICIES AND PROCEDURES

Student: RABIATU UMAR AHMAD

Student ID: C11/26/CGRCE/17569

Cohort: 11

Date: 18th September, 2026

1. NexusTech Solutions Acceptable Use Policy

Policy Title: NexusTech Solutions Acceptable Use Policy

Version: 1.0

Policy Owner: Information Security Manager

Approval Authority: Marcus Vance, CEO

Effective Date: 12th September, 2026

Review Date: 18th September, 2026

Purpose

The purpose of this policy is to make sure that NexusTech devices, networks, accounts and digital resources are used safely and responsibly.

Scope

This policy applies to all NexusTech staff, contractors and other authorised users who use company systems, devices, networks or information.

Acceptable Use

Users must use company facilities mainly for authorised business activities. Users must protect their passwords and devices, strictly follow security rules and report suspicious activity.

Prohibited Activities

Users must not access systems without permission, install unauthorised software, deliberately introduce malware, share passwords, use company systems for illegal activities, or attempt to bypass security controls.

Reasonable Personal Use

Limited personal use may be allowed if it does not interfere with work, create security risks, consume unreasonable resources or break company rules.

Roles and Responsibilities

Users must strictly follow the policy and report problems. IT/Security implements and monitors controls. Managers approve access and support compliance. HR supports awareness and appropriate action for serious or repeated violations.

Compliance and Enforcement

NexusTech may monitor use of its systems. Failure to comply may lead to corrective or disciplinary action according to company rules.

Exceptions

Exceptions must be requested formally, include a reason and risk assessment, and be approved by the appropriate authority before use.

Review

The policy will be reviewed regularly and whenever major business, technology or security changes occur.

2. User Access Request Procedure

Purpose

The purpose is to provide simple steps for requesting, approving and creating user access to NexusTech systems.

Scope

The scope applies to new access, changes to existing access and removal of access.

Procedure

1. Access request is received through the approved ticketing system or workflow.
2. Make sure that the request contains the user's name, role, system required and reason for access.
3. Make sure that the user's manager has approved the request.
4. Get data-owner approval where the system or information requires it.
5. Verify that the requested access matches the user's job role.
6. Use least privilege by giving only the access needed.
7. Create or update the account using approved processes.

8. Check that the access works correctly.
9. Inform the user and manager that the request has been completed.
10. Record the approvals, access provided and completion details in the ticket.
11. Close the ticket after all evidence has been captured.
12. Emergency access must be clearly marked, approved by an authorised person and reviewed afterwards.

Record Retention

Access requests, approvals and completion evidence should be retained according to NexusTech record-retention requirements so that an audit trail is available.

3. Policy Implementation and Communication

Audience	Key Message	Channel	Owner	Timing
General employees	Use company resources responsibly and report security problems.	Email, all-hands, learning module	Security/HR	Week 1
IT staff	Follow AUP and access procedures; protect systems.	Technical briefing + training	Security Manager	Week 1
Management	Support enforcement and approve access appropriately.	Management briefing	Security Manager	Week 1

4. Policy Review and Maintenance Evidence

The Acceptable Use Policy should be reviewed because NexusTech has migrated its primary database to AWS. This is a major technology change and may create new requirements for cloud access, data protection and acceptable use.

The review should also consider the incident where an employee shared a sensitive document through a personal cloud storage account.

The review should involve IT/Security, management, relevant data owners, HR and other affected stakeholders. The AUP should clarify acceptable use of approved cloud services and the protection of sensitive information.

The Information Security Manager should own the revised policy, with approval through the CEO/appropriate management authority. There should be annual review or after a technology update.

5. Supporting Evidence Note

This document is submitted as a supporting file for the GRC102 Week 2 Practical Laboratory. It provides the underlying policy, procedure, communication plan and review evidence supporting the written PDF report.
